1.0 INTRODUCTION

Background

Dragon's Breath Solar LLC (Applicant) is developing the Dragon's Breath Solar (Project), a commercial solar energy facility. The Project is located on approximately 31-acres of land that will be leased by the Applicant in Tazewell County, Illinois. The Project will be located north of Stringtown Rd, west of Bennett Rd, east of an agricultural field, and south of Illinois Route 122. The site is accessible off of Stringtown Rd and the approximate geographical coordinates of the Project are 40° 25' 43.25" N, 89° 22' 22.12" W. Refer to **Exhibit B: Decommissioning Site Plan** for general location and Project layout.

This Decommissioning Plan (Plan) is developed in compliance with Agricultural Impact Mitigation Agreement (AIMA) and the Tazewell County Zoning Ordinance, Chapter 156: Solar Energy Systems.

This Plan covers and addresses the following elements outlined in the conditions of the AIMA:

- Underground Cabling;
- Repair of compaction and rutting;
- Prevention of soil erosion;
- Access roads;
- Weed/vegetation control;
- Decommissioning plans and financial assurance of commercial solar energy facilities.

In addition, if the Project ceases to perform its intended function for more than twelve (12) consecutive months, the Project shall be removed, and the site restored in accordance with this Decommissioning Plan.

2.0 PROJECT COMPONENTS

The Project components that are subject to decommission include the equipment summarized below. The decommission activities associated with these components are discussed in Section 3.0 of this Plan.

Solar Photovoltaic (PV) Equipment

The Project will use Solar Photovoltaic (PV) modules mounted on tracker steel pile foundations.

Internal Power Collection System

The PV-generated DC power will be collected from each of the rows of PV modules through one or more combiner boxes and conveyed to inverters. The inverters will convert the DC power to AC power, which will be interconnected into the existing power line running along the north side of Stringtown Road.

Transformers and PV combining switchgear will be mounted on concrete foundations.

Earthwork

It is anticipated that the site will require minimal grading for the Project. Site grading and drainage will be conducted in accordance with Final Civil Construction Plans.

Roads

Access to the Project will be via Stringtown Road. The site access will be constructed in accordance with County and/or Township requirements and the Final Civil Construction Plans. The on-site access road is anticipated to be gravel.

Fencing

The Project site will be fenced with an eight foot chainlink fence. An entry gate will be provided near the site access along Stringtown Road.

3.0 PROJECT DECOMMISSION AND RECYCLING

Decommission includes removal of above-ground and below-ground structures. Only minor grading is anticipated during construction; and therefore, will require limited or no grading during the decommissioning process. Temporary erosion and sedimentation control Best Management Practices (BMPs) should be implemented during the decommission phase of the Project.

Decommission Preparation

Prior to commencement of the decommission process, the contractor shall assess existing site conditions and prepare the site for demolition. Demolition debris shall be placed in temporary onsite storage area(s) pending final transportation and disposal and/or recycling according to the procedures listed below.

Permits and Approvals

It is anticipated that a National Pollutant Discharge Elimination System (NPDES) Permit from the Illinois Environmental Protection Agency (IEPA) and a Stormwater Pollution Prevention Plan (SWPPP) will be required prior to decommissioning. The proposed development area of the site does not contain Waters of the United States, per the U.S. Environmental Protection Agency (EPA) GeoViewer. The site does contain Threatened or Endangered species; thus, federal approvals might be expected. Per the U.S. Fish and Wildlife Service (USFWS) Information, Planning and Conservation (IPaC), the following species may occur within the boundary of the project: Indiana Bat, Northern Long-eared Bat, Tricolored Bat, Whooping Crane, Monarch Butterfly, Decurrent False Aster, Eastern Prairie Fringed Orchid, and Lakeside Daisy. Appropriate applications for permits from the state and/or local authorities having jurisdiction (AHJs) shall be submitted and approved prior to decommission activities.

PV Equipment Removal and Recycling

During decommissioning, Project components shall be removed from the site and recycled or disposed of at an appropriately licensed disposal facility. Above ground portions of the PV module supports shall be removed. Below ground portions of the PV module supports shall be removed entirely where practical, but to a depth of five feet at a minimum. If ground-screw foundations are used, they shall be removed and recycled. Those supports that are more firmly anchored (e.g., such as embedded in bedrock) may be cut off at least five feet below ground or to the depth of bedrock, and the remaining support left in place. This depth will avoid impact of underground equipment on future farming or other construction activities. The demolition debris and removed equipment may be cut or dismantled into pieces that can be safely transported utilizing the onsite equipment. The debris and equipment shall be processed for transportation and delivery to an appropriately licensed disposal facility or recycling center. Modules shall be recycled in accordance with the solar module manufacturer's (or equivalent) recycling program. No hazardous materials or waste will be used during operation of the solar facility, and disposal of hazardous material or waste will not be required during decommission.

Internal Power Collection System

The cables, inverters, and transformers shall be dismantled. The concrete foundations shall be broken up, removed and recycled. The underground cable shall be removed to a minimum depth of five feet, per the Tazewell County Zoning Ordinance, Chapter 156: Solar Energy Systems. Overhead

conductors shall be removed from the poles, and the poles and pole foundations shall be removed. Aluminum from the conductors shall be recycled or removed from the site to an appropriately licensed disposal facility.

Roads

Gravel from on-site access roads shall be removed and recycled. Once the gravel is removed, the soil below the access roads shall be scarified a depth of 18-inches and blended as noted in the Site Restoration section below.

Fencing

Project site perimeter fence shall be removed at the end of the decommission project. Since the Project site is not currently fenced, this includes removal of all posts, footings, fencing material, gates, etc. to return the site to pre-project condition.

Landscaping

Unless requested in writing to remain in place by the Land Owner, all vegetative landscaping and screening installed as part of the Project will be removed. Any weed control equipment used during the Project, including weed-control fabrics or other ground covers shall be removed. Landscape areas will be restored as noted in the Site Restoration section below.

Site Restoration

Once removal of all project equipment and landscaping is complete, all areas of the Project site that are unvegetated or where vegetation was disturbed/removed as part of decommissioning shall be restored by the Applicant. Restoration shall consist of applying additional topsoil, seed, and necessary fertilizer to ensure that adequate vegetation is established throughout the Project site. Areas that exhibit compaction and/or rutting shall be scarified a depth of 18-inches prior to placement of topsoil and seed. The existence of drainage tile lines or underground utilities may necessitate less scarification depth. The Applicant is responsible for promptly repairing damage to drain tiles and other drainage systems that result from decommissioning of the commercial solar energy facility.

4.0 FUTURE LAND USE

Per the requirements of the Illinois Department of Agriculture (IDOA), an Agricultural Impact Mitigation Agreement (AIMA) must be signed by the Facility owner and filed with the County Board prior to the commencement of construction. The IDOA prepared the AIMA to help preserve the integrity of any agricultural land that is impacted by the construction and decommission of a commercial solar energy facility. Per the AIMA, all solar panels shall be removed from the property and the land must be restored to its pre-existing condition for agricultural use at the end of the project life cycle. This Decommissioning Plan is consistent with the AIMA requirements to return the land to its pre-project conditions as an agricultural field.

5.0 PROJECT DECOMMISSION COSTS AND FINANCIAL ASSURANCE

The AIMA requires the Owner and/or Operator to provide a present-day decommission cost estimate, and provide the County with Financial Assurance to cover the estimated costs of Decommission of the Facility. See **Exhibit A: Opinion of Probable Construction Cost without Salvage**. Industry standard prices in 2023 for removal costs were determined using RS Means cost data. Removal cost includes materials, contractor installation/demolition, mobilization and demobilization, overhead and profit, and performance bonding. The estimated costs of decommissioning are to be revaluated every four years by a third party professional engineer for economic relevance.
